

# 硅谷课堂第九天-点播管理模块(三)

### 硅谷课堂第九天-点播管理模块(三)

- 一、点播管理模块-课程统计
  - ■1、课程统计需求
  - 2、课程统计接口
    - -2.1、创建相关代码
    - •2.2、编写 Controller
    - •2.3、编写 Service 和实现
    - •2.4、编写 Mapper
    - 3、课程统计前端
      - ■3.1、定义接口
      - •3.2、安装 ECharts 组件
      - •3.3、编写页面

### 二、整合腾讯云点播

- 1、功能需求介绍
  - ■1.1、上传视频
  - ■1.2、删除视频
  - ■1.3、视频播放(后续完成)
  - 2、腾讯云点播介绍
    - •2.1、开通"云点播"服务
    - ■2.2、管理控制台
    - ■2.3、上传视频
    - -2.4、前端集成
  - 3、编写视频点播接口
    - ■3.1、创建相关类
    - ■3.2、引入相关依赖
    - •3.3、编写 Controller
    - •3.4、编写 Service
  - 4、完善上传视频功能
    - ■4.1、定义接口

- -4.1、添加上传视频
- 5、腾讯云上传视频其他方式
  - •5.1、客户端上传视频
- 5.2、操作步骤一(申请上传签名)
  - ■5.2.1、找到 Java 签名示例
  - ■5.2.2、VodController 编写签名接口
  - 5.3、操作步骤二(SDK上传)
    - ■5.3.1、下载 Demo 源码修改
    - ■5.3.2、html 文件测试上传
- 6、完善删除视频功能
  - ■6.1、修改 VideoController 方法
  - •6.2、修改 Service 方法

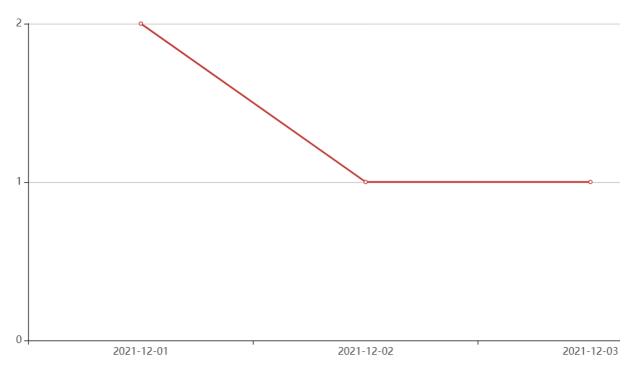

# 一、点播管理模块-课程统计

# 1、课程统计需求

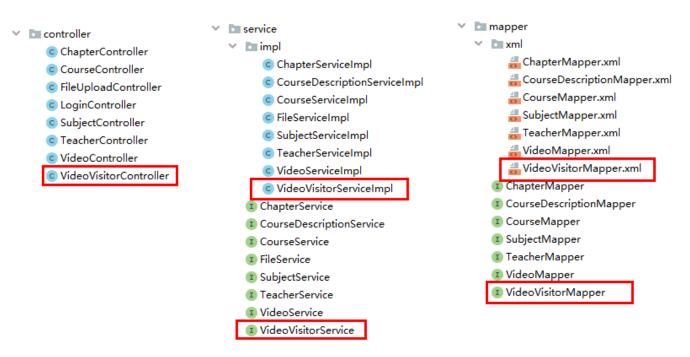

□ 2021-11-03 □ 2022-01-01 □ **Q** 查询

### 观看课程人数统计

# 2、课程统计接口

# 2.1、创建相关代码

### 2.2、编写 Controller

#### **VideoVisitorController**

#### 2.3、编写 Service 和实现

VideoVisitorService 和 VideoVisitorServiceImpl

```
@Service
public class VideoVisitorServiceImpl extends ServiceImpl VideoVisitorMapper, VideoVisitor> implement
   @Override
    public Map<String, Object> findCount(Long courseId, String startDate, String endDate) {
        List<VideoVisitorCountVo> videoVisitorVoList =
                baseMapper.findCount(courseId, startDate, endDate);
        Map<String, Object> map = new HashMap<>();
        List<String> dateList =
                videoVisitorVoList.stream().map(VideoVisitorCountVo::getJoinTime).
                               collect(Collectors.toList());
        List<Integer> countList = videoVisitorVoList.stream().map(VideoVisitorCountVo::getUserCount
                                collect(Collectors.toList());
       map.put("xData", dateList);
       map.put("yData", countList);
       return map;
```

### 2.4、编写 Mapper

#### (1) VideoVisitorMapper

## (2) VideoVisitorMapper.xml 文件

```
<!DOCTYPE mapper PUBLIC "-//mybatis.org//DTD Mapper 3.0//EN" "http://mybatis.org/dtd/mybatis-3-map</pre>
<mapper namespace="com.atguigu.ggkt.vod.mapper.VideoVisitorMapper">
    <select id="findCount" resultType="com.atguigu.ggkt.vo.vod.VideoVisitorCountVo">
        SELECT
           DATE(join_time) AS joinTime,
           COUNT(*) AS userCount
        FROM video visitor
        <where>
            <if test="startDate != null and startDate != ''">
                AND DATE(join_time) >= #{startDate}
            <if test="endDate != null and endDate != ''">
                AND DATE(join_time) <= #{endDate}
            </if>
           and course_id=#{courseId}
        </where>
       GROUP BY DATE(join_time)
       ORDER BY DATE(join time)
    </select>
```

# 3、课程统计前端

3.1、定义接口

创建 videoVisitor.js 定义接口

```
import request from "@/utils/request";

const api_name = "/admin/vod/videoVisitor";

export default {
  findCount(courseId, startDate, endDate) {
    return request({
      url: `${api_name}/findCount/${courseId}/${startDate}/${endDate}`,
      method: "get",
    });
  },
};
```

### 3.2、安装 ECharts 组件

ECharts 是百度的一个项目,后来百度把 Echart 捐给 apache,用于图表展示,提供了常规的折线/面积图、散点(气泡)图、饼图、K 线图,用于统计的箱形图,用于地理数据可视化的地图、热力图、路径图,用于关系数据可视化的关系图、Treemap、旭日图,多维数据可视化的平行坐标图,还有用于 BI 的漏斗图,仪表盘,并且支持图与图之间的混搭。

官方网站: https://echarts.apache.org/zh/index.html

```
npm install --save echarts@4.1.0
```

## 3.3、编写页面

## 创建 chart.vue 页面

```
<div class="app-container">
 <el-form :inline="true" class="demo-form-inline">
       v-model="startDate"
       type="date"
       placeholder="选择开始日期"
       value-format="yyyy-MM-dd"
    </el-form-item>
    <el-form-item>
       v-model="endDate"
       type="date"
       placeholder="选择截止日期"
       value-format="yyyy-MM-dd"
    </el-form-item>
    <el-button
     :disabled="btnDisabled"
     type="primary"
     icon="el-icon-search"
     @click="showChart()"
     >查询</el-button
  </el-form>
  <div id="chart" class="chart" style="height:500px;" />
</div>
import echarts from "echarts";
import api from "@/api/vod/videoVisitor";
export default {
 data() {
```

```
return {
   courseId: "",
   startDate: "",
   endDate: "",
   btnDisabled: false,
created() {
  this.courseId = this.$route.params.id;
  let currentDate = new Date();
  this.startDate = this.dateFormat(
   new Date(currentDate.getTime() - 7 * 24 * 3600 * 1000)
  this.endDate = this.dateFormat(currentDate);
  this.showChart();
methods: {
  showChart() {
     .findCount(this.courseId, this.startDate, this.endDate)
     .then((response) => {
       this.setChartData(response.data);
  setChartData(data) {
    var myChart = echarts.init(document.getElementById("chart"));
    var option = {
     title: {
       text:"观看课程人数统计",
     xAxis: {
      data: data.xData,
     yAxis: {
```

```
minInterval: 1,
   series: [
       type: "line",
      data: data.yData,
 myChart.setOption(option);
},
dateFormat(date) {
  let fmt = "YYYY-mm-dd";
  let ret;
  const opt = {
   "Y+": date.getFullYear().toString(), // 年
   "m+": (date.getMonth() + 1).toString(), // 月
   "d+": date.getDate().toString(), // 日
   "H+": date.getHours().toString(), // 时
   "M+": date.getMinutes().toString(), // 分
   "S+": date.getSeconds().toString(), // 秒
  for (let k in opt) {
   ret = new RegExp("(" + k + ")").exec(fmt);
   if (ret) {
     fmt = fmt.replace(
       ret[1],
       ret[1].length == 1 ? opt[k] : opt[k].padStart(ret[1].length, "0")
 return fmt;
```

# 二、整合**腾讯**云点播

# 1、功能需求介绍

## 1.1、上传视频

在发布课程时候,需要添加课时并且上传课程视频,这个时候需要使用到腾讯云点播服务进行上传视频管理

#### 1.2、删除视频

- (1) 添加小节, 上传课程视频
- (2) 删除小节时候, 需要删除视频
- (3) 删除课程时候,需要删除课程,章节,小节和视频

## 1.3、视频播放(后续完成)

# 2、腾讯云点播介绍

腾讯云点播(Video on Demand, VOD)基于腾讯多年技术积累与基础设施建设,为有音视频应用相关需求的客户提供包括音视频存储管理、音视频转码处理、音视频加速播放和音视频通信服务的一站式解决方案。

文档中心: https://cloud.tencent.com/document/product/266

#### 2.1、开通"云点播"服务

### 2.2、管理控制台

### 2.3、上传视频

上传视频可将视频上传到云点播的存储中,以进行后续的处理和分发等。

- 单击左侧菜单栏【媒资管理 > 视频管理】,默认展示【已上传】标签页;
- 点击【上传视频】按钮:
- 单击【选择视频】, 选择本地视频文件;
- 单击【开始上传】:
- 页面将自动跳转至【正在上传】标签页,本地文件所在行【状态】栏为"上传成功" 时,单击【已上传】标签页,可见完成上传的视频;

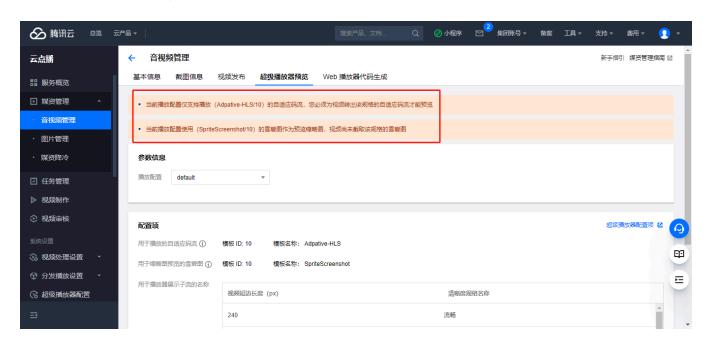

• 单击【管理】. 可以查看视频详情。

#### 2.4、前端集成

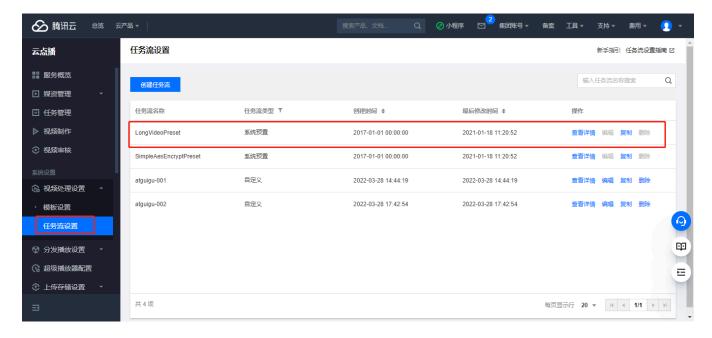

前端集成有两种方式,使用"超级播放器预览"与"web 播放器预览",后者代码已经不更新,推荐使用前者,因此"web 播放器预览"仅做了解。

1、查看"web 播放器预览"

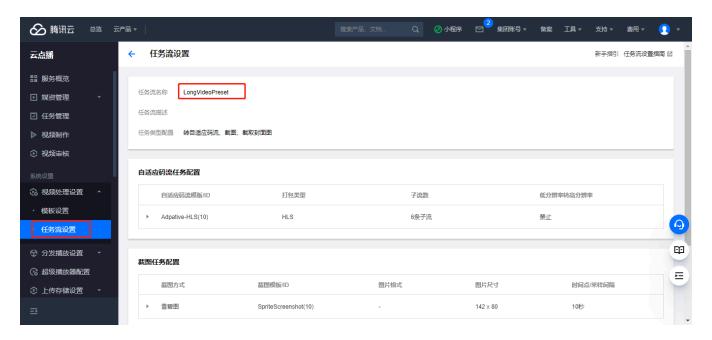

说明:需要将视频进行转码,才能支持超级播放器播放,转码为:自适应码流

# 2、查看"任务流设置"

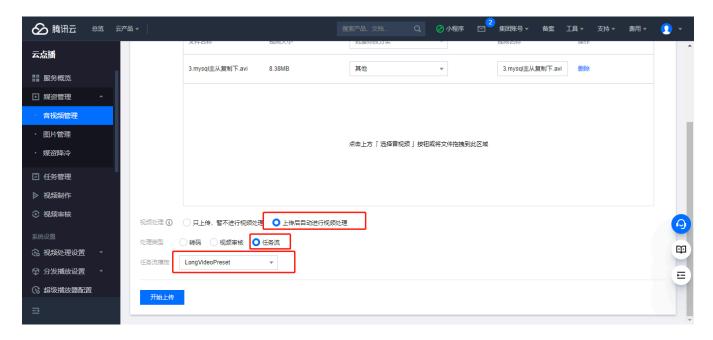

# 3、查看详情

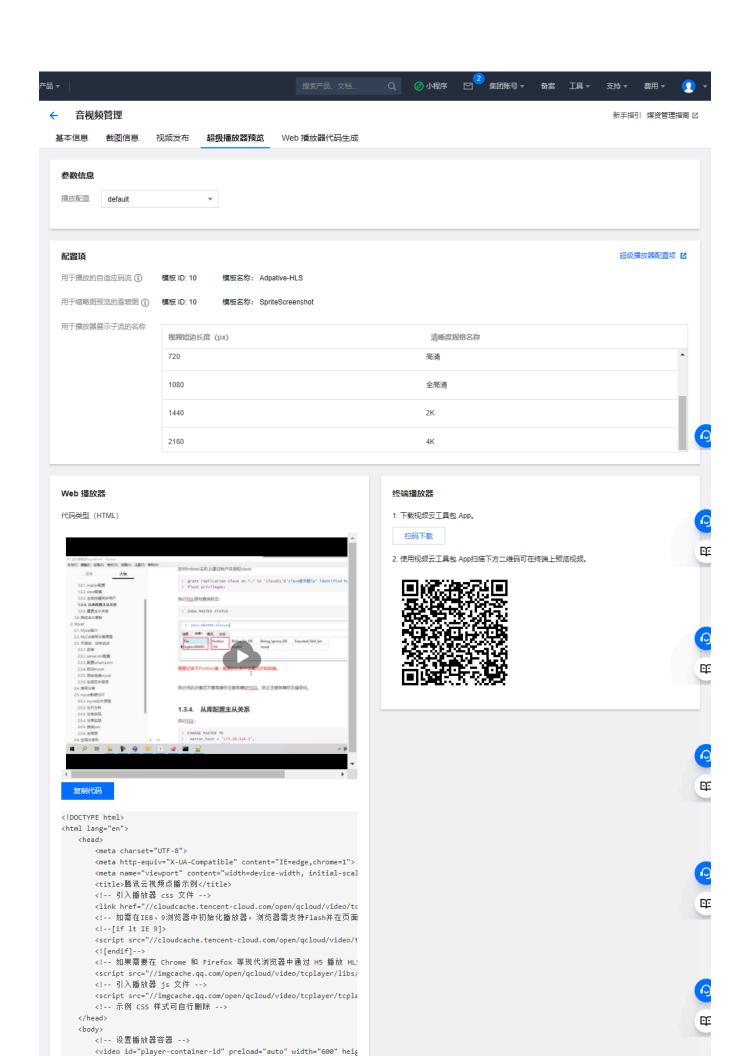

当前任务流就是系统默认的"自适应码流"任务流

## 4、在【音视频管理】重新上传视频

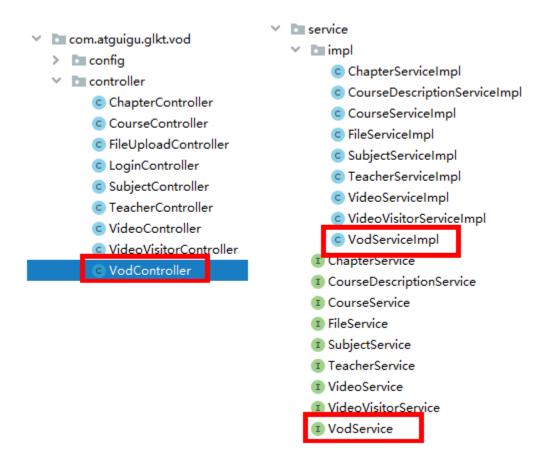

# 5、查看详情

6、复制代码 index.html 到项目, 即可播放

# 3、编写视频点播接口

## 3.1、创建相关类

### 3.2、引入相关依赖

(1) 在 service\_vod 模块引入

#### 3.3、编写 Controller

(1) 上传视频集成方案: https://cloud.tencent.com/document/product/266/10276

# (2) 删除视频

可在线生成代码

地址:https://console.cloud.tencent.com/api/ explorer?Product=vod&Version=2018-07-17&Action=DeleteMedia

```
@Api(tags = "腾讯云点播")
@RestController
@RequestMapping("/admin/vod")
@CrossOrigin
public class VodController {
   @Autowired
    private VodService vodService;
    @PostMapping("upload")
    public Result uploadVideo(
           @ApiParam(name = "file", value = "文件", required = true)
           @RequestParam("file") MultipartFile file) throws IOException {
        InputStream inputStream = file.getInputStream();
        String originalFilename = file.getOriginalFilename();
        String videoId = vodService.uploadVideo(inputStream, originalFilename);
        return Result.ok(videoId);
    @DeleteMapping("remove/{videoSourceId}")
    public Result removeVideo( @PathVariable String videoSourceId) {
        vodService.removeVideo(videoSourceId);
        return Result.ok();
```

#### 3.4、编写 Service

(1) VodService 定义方法

(2) VodServiceImpl 实现方法

```
@Service
public class VodServiceImpl implements VodService {
   @Override
   public String uploadVideo(InputStream inputStream, String originalFilename) {
       try (
           VodUploadClient client =
                   new VodUploadClient(ConstantPropertiesUtil.ACCESS_KEY_ID,
                                       ConstantPropertiesUtil.ACCESS_KEY_SECRET);
           VodUploadRequest request = new VodUploadRequest();
           request.setMediaFilePath("D:\\001.mp4");
           request.setProcedure("LongVideoPreset");
           VodUploadResponse response = client.upload("ap-guangzhou", request);
           String fileId = response.getFileId();
           System.out.println("Upload FileId = {}"+response.getFileId());
           return fileId;
       } catch (Exception e) {
           System.out.println(e.toString());
       return null;
   @Override
   public void removeVideo(String videoSourceId) {
      try{
           // 实例化一个认证对象,入参需要传入腾讯云账户secretId, secretKey,此处还需注意密钥对的保密
           Credential cred =
                   new Credential(ConstantPropertiesUtil ACCESS_KEY_ID,
                           ConstantPropertiesUtil.ACCESS KEY SECRET);
           VodClient client = new VodClient(cred, "");
```

```
// 实例化一个请求对象,每个接口都会对应一个request对象
DeleteMediaRequest req = new DeleteMediaRequest();
req.setFileId(videoSourceId);
// 返回的resp是一个DeleteMediaResponse的实例,与请求对象对应
DeleteMediaResponse resp = client.DeleteMedia(req);
// 输出json格式的字符串回包
System.out.println(DeleteMediaResponse.toJsonString(resp));
} catch (TencentCloudSDKException e) {
System.out.println(e.toString());
}
}
}
```

# 4、完善上传视频功能

## 4.1、定义接口

创建 vod.js 定义接口

```
import request from "@/utils/request";

export default {
    //删除视频
    removeByVodId(id) {
        return request({
          url: `/admin/vod/remove/${id}`,
          method: "delete",
        });
    },
};
```

# 4.1、添加上传视频

(1) 修改 Video/Form.vue 页面

```
<el-dialog :visible="dialogVisible" title="添加课时" @close="close()">
  <el-form :model="video" label-width="120px">
    <el-form-item label="课时标题">
      <el-input v-model="video.title" />
    </el-form-item>
    <el-form-item label="课时排序">
      <el-input-number v-model="video.sort" :min="0" />
    </el-form-item>
    <el-form-item label="是否免费">
      <el-radio-group v-model="video.isFree">
       <el-radio :label="0">免费</el-radio>
        <el-radio :label="1">默认</el-radio>
    </el-form-item>
    <el-form-item label="上传视频">
     <el-upload
       ref="upload"
        :auto-upload="false"
        :on-error="handleUploadError"
        :on-exceed="handleUploadExceed"
        :file-list="fileList"
        :limit="1"
        :before-remove="handleBeforeRemove"
        :on-remove="handleOnRemove"
        :action="BASE_API + '/admin/vod/upload'"
        <el-button slot="trigger" size="small" type="primary"</pre>
         >选择视频</el-button
        <el-button
          :disabled="uploadBtnDisabled"
          style="margin-left: 10px;"
          size="small"
```

```
type="success"
          @click="submitUpload()"
          >上传</el-button
      </el-upload>
    </el-form-item>
  </el-form>
  <div slot="footer" class="dialog-footer">
    <el-button @click="close()">取 消</el-button>
    <el-button type="primary" @click="saveOrUpdate()">确 定</el-button>
  </div>
</el-dialog>
import videoApi from "@/api/vod/video";
import vodApi from "@/api/vod/vod";
export default {
  data() {
    return {
     BASE_API: "http://localhost:8301",
     dialogVisible: false,
     video: {
       sort: 0,
       free: false,
     fileList: [], // 上传文件列表
     uploadBtnDisabled: false,
 methods: {
   open(chapterId, videoId) {
     this.dialogVisible = true;
      this.video.chapterId = chapterId;
      if (videoId) {
       videoApi.getById(videoId).then((response) => {
          this.video = response.data;
```

```
if (this.video.videoOriginalName) {
        this.fileList = [{ name: this.video.videoOriginalName }];
close() {
 this.dialogVisible = false;
 this resetForm();
resetForm() {
  this.video = {
   sort: 0,
   free: false,
  this.fileList = []; // 重置视频上传列表
saveOrUpdate() {
 if (!this.video.id) {
   this.save();
 } else {
   this.update();
save() {
 this.video.courseId = this.$parent.$parent.courseId;
 videoApi.save(this.video).then((response) => {
    this.$message.success(response.message);
   this close();
   this.$parent.fetchNodeList();
update() {
 videoApi.updateById(this.video).then((response) => {
```

```
this.$message.success(response.message);
   this.close();
    this.$parent.fetchNodeList();
handleUploadExceed(files, fileList) {
 this.$message.warning("想要重新上传视频,请先删除已上传的视频");
submitUpload() {
 this.uploadBtnDisabled = true;
 this.$refs.upload.submit(); // 提交上传请求
handleUploadSuccess(response, file, fileList) {
 this.uploadBtnDisabled = false;
 this.video.videoSourceId = response.data;
 this.video.videoOriginalName = file.name;
handleUploadError() {
 this.uploadBtnDisabled = false;
 this.$message.error("上传失败2");
handleBeforeRemove(file, fileList) {
 return this.$confirm(`确定移除 ${file.name}?`);
handleOnRemove(file, fileList) {
  if (!this.video.videoSourceId) {
   return
 vodApi.removeByVodId(this.video.videoSourceId).then((response) => {
```

```
this.video.videoSourceId = "";
    this.video.videoOriginalName = "";
    videoApi.updateById(this.video);
    this.$message.success(response.message);
    });
    },
};
</script>
```

# 5、腾讯云上传视频其他方式

## 5.1、客户端上传视频

## 5.2、操作步骤一(申请上传签名)

### 5.2.1、找到 Java 签名示例

# 操作步骤

# 1. 申请上传签名

客户端需要向 App 的签名派发服务器申请上传签名,签名生成步骤请参见 客户端上传签名。多语言签名生成示例请参见:

- PHP 签名示例
- Java 签名示例
- Node.js 签名示例
- C# 签名示例
- Python 签名示例

## 5.2.2、VodController 编写签名接口

# Signature 类

```
import java.util.Random;
import javax.crypto.Mac;
import javax.crypto.spec.SecretKeySpec;
import sun.misc.BASE64Encoder;
public class Signature {
    private String secretId;
   private String secretKey;
    private long currentTime;
    private int random;
    private int signValidDuration;
    private static final String HMAC ALGORITHM = "HmacSHA1"; //签名算法
    private static final String CONTENT_CHARSET = "UTF-8";
    public static byte[] byteMerger(byte[] byte1, byte[] byte2) {
        byte[] byte3 = new byte[byte1.length + byte2.length];
       System.arraycopy(byte1, 0, byte3, 0, byte1.length);
        System.arraycopy(byte2, 0, byte3, byte1.length, byte2.length);
       return byte3;
    public String getUploadSignature() throws Exception {
       String strSign = "";
       String contextStr = "";
       long endTime = (currentTime + signValidDuration);
        contextStr += "secretId=" + java.net.URLEncoder.encode(secretId, "utf8");
       contextStr += "&currentTimeStamp=" + currentTime;
       contextStr += "&expireTime=" + endTime;
       contextStr += "&random=" + random;
        contextStr += "&procedure=LongVideoPreset";
        try (
            Mac mac = Mac.getInstance(HMAC_ALGORITHM);
            SecretKeySpec secretKey = new SecretKeySpec(this.secretKey.getBytes(CONTENT CHARSET),
           mac.init(secretKey);
            byte[] hash = mac.doFinal(contextStr.getBytes(CONTENT CHARSET));
```

```
byte[] sigBuf = byteMerger(hash, contextStr.getBytes("utf8"));
       strSign = base64Encode(sigBuf);
       strSign = strSign.replace(" ", "").replace("\n", "").replace("\r", "");
   } catch (Exception e) {
        throw e;
   return strSign;
private String base64Encode(byte[] buffer) {
    BASE64Encoder encoder = new BASE64Encoder();
   return encoder.encode(buffer);
public void setSecretId(String secretId) {
   this.secretId = secretId;
public void setSecretKey(String secretKey) {
   this.secretKey = secretKey;
public void setCurrentTime(long currentTime) {
   this.currentTime = currentTime;
public void setRandom(int random) {
    this.random = random;
public void setSignValidDuration(int signValidDuration) {
   this.signValidDuration = signValidDuration;
```

VodController 类

```
@GetMapping("sign")
public Result sign() {
   Signature sign = new Signature();
   sign.setSecretId(ConstantPropertiesUtil.ACCESS KEY ID);
   sign.setSecretKey(ConstantPropertiesUtil.ACCESS KEY SECRET);
   sign.setCurrentTime(System.currentTimeMillis() / 1000);
   sign.setRandom(new Random().nextInt(java.lang.Integer.MAX_VALUE));
   sign.setSignValidDuration(3600 * 24 * 2); // 签名有效期: 2天
   try {
       String signature = sign.getUploadSignature();
       System.out.println("signature : " + signature);
       return Result.ok(signature);
   } catch (Exception e) {
       System.out.print("获取签名失败");
       e.printStackTrace();
       return Result.fail(null);
```

# 5.3、操作步骤二(SDK 上传)

# 2. 使用 SDK 上传视频

为了方便客户端的视频上传,云点播提供多平台 SDK 方便客户接入,详细请参见:

- Android 上传 SDK
- iOS 上传 SDK
- Web 上传 SDK

# 5.3.1、下载 Demo 源码修改

<script src="https://cdn-go.cn/cdn/vod-js-sdk-v6/latest/vod-js-sdk</pre>

请单击此处 查看 script 方式引入的 Demo, 请单击此处 查看 Demo 源码。

## 5.3.2、html 文件测试上传

示例1点击"直接上传视频"按钮即可上传视频

示例1: 直接上传视频

直接上传视频

视频名称: 20220426\_102243.mp4; 上传进度: 100%; fileId: 387702299864167176; 上传结果: 上传成功; 地址: http://1310644373.vod2.myqcloud.com/7e29f8a2vodcq1310644373/cecbc482387702299864167176/ZON40

```
<meta charset="utf-8" />
<meta http-equiv="Content-Type" content="text/html; charset=UTF-8" />
<meta http-equiv="X-UA-Compatible" content="IE=edge" />
<meta name="viewport" content="width=device-width, initial-scale=1" />
<title>QCloud VIDEO UGC UPLOAD SDK</title>
k
 href="//cdnjs.cloudflare.com/ajax/libs/twitter-bootstrap/3.3.5/css/bootstrap.min.css"
 rel="stylesheet"
<style type="text/css">
  .text-danger {
  color: red;
   text-align: left !important;
   width: 100%;

</script>
```

# 6、完善删除视频功能

## 6.1、修改 VideoController 方法

修改删除小节方法

```
@ApiOperation(value = "删除")
@DeleteMapping("remove/{id}")
public Result remove(@PathVariable Long id) {
    videoService.removeVideoById(id);
    return Result.ok();
}
```

### 6.2、修改 Service 方法

修改 VideoService 和 VideoServiceImpl

```
@Service
public class VideoServiceImpl extends ServiceImpl<VideoMapper, Video implements VideoService {</pre>
   @Autowired
    private VodService vodService;
    public void removeVideoByCourseId(Long id) {
        QueryWrapper<Video> wrapper = new QueryWrapper<>();
       wrapper.eq("course_id",id);
        List<Video> videoList = baseMapper.selectList(wrapper);
        for(Video video:videoList) {
            String videoSourceId = video.getVideoSourceId();
            if(!StringUtils.isEmpty(videoSourceId)) {
                vodService.removeVideo(videoSourceId);
       baseMapper.delete(wrapper);
    public void removeVideoById(Long id) {
        Video video = baseMapper.selectById(id);
        String videoSourceId = video.getVideoSourceId();
        if(!StringUtils.isEmpty(videoSourceId)) {
            vodService.removeVideo(videoSourceId);
```

```
//2 删除小节
baseMapper.deleteById(id);
}
}
```
